

THE WORLDWIDE LEADER  
IN VIBRATION TECHNOLOGY

### VH

Electric high frequency internal vibrators

Electric vibrators for concrete consolidation characterised by high performances, consistent speed and remarkable resistance to abrasion.

### VHPG

Internal high frequency vibrators with pistol grip

For thin layers of concrete, such as floors or slabs, a short, light and manoeuvrable vibrator is needed. For all these cases, the ideal solution is to use a pistol grip poker.

### VHA

High frequency pneumatic immersion vibrators

Ease-of-use and maintenance-free make the VHA the perfect solution for compacting concrete when electricity is not available.

### EWO

High frequency internal vibrators with built-in converter

Equipped with compact electronic frequency converter directly applied to the supply cable directly, suitable for the connection to a single phase main power socket.

### CM

Frequency and voltage converters

Frequency and voltage converters equipped with permanent magnets, specifically designed to power high frequency concrete vibrators continuously.

# EXTERNAL VIBRATORS

FOR CONCRETE CONSOLIDATION

FOR CONCRETE CONSOLIDATION

## ELECTRIC VIBRATORS

High frequency electric vibrators for concrete compaction at the construction site or precast factories.

## CONTROL PANEL

Designed for precast plants and construction sites. Possibility to power on the vibrators one by one, in groups or all together and to supply the vibrators with remote control.

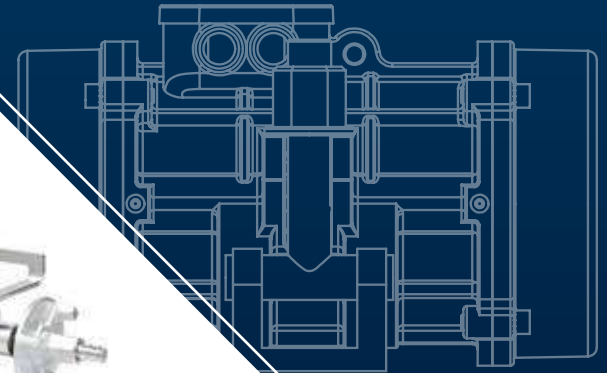

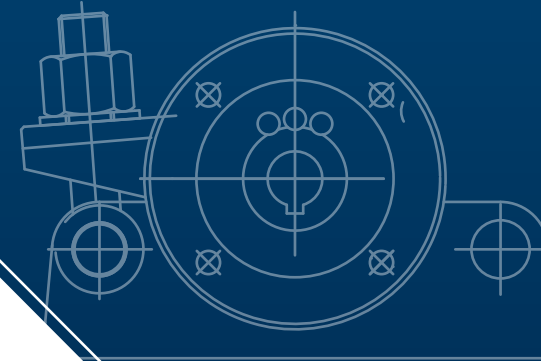

## PNEUMATIC VIBRATORS

Pneumatic vibrators for concrete compaction for formworks and moulds.

## FASTENING SYSTEMS

Brackets for quick mounting of vibrators on wooden or steel formworks.
